

IfcCallGraphLoad::execute

IfcStructureBlocks
::execute

DocumentStorage::parseDocument

```
graph LR; A[IfcCallGraphLoad::execute] --> C[DocumentStorage::parseDocument]; B[IfcStructureBlocks::execute] --> C;
```

The diagram illustrates a flow or dependency where two separate execution blocks on the left, 'IfcCallGraphLoad::execute' and 'IfcStructureBlocks::execute', both point to a single target block on the right, 'DocumentStorage::parseDocument'. The target block is shaded gray, while the source blocks are white with black borders. Blue arrows indicate the direction of the flow from the source blocks to the target block.
