graph LR; A["ghidra.app.plugin.core.decompile.actions.  
BackwardsSliceAction.actionPerformed"] --> D["ghidra.app.decompiler.component.  
DecompilerPanel.addVarnodeHighlights"]; B["ghidra.app.plugin.core.decompile.actions.  
ForwardSliceAction.actionPerformed"] --> D; C["ghidra.app.plugin.core.decompile.actions.  
HighlightDefinedUseAction.actionPerformed"] --> D;
```

The diagram illustrates a call graph where three different actions from the Ghidra decompiler plugin core converge on a single method in the decompiler component. The source actions are BackwardsSliceAction.actionPerformed, ForwardSliceAction.actionPerformed, and HighlightDefinedUseAction.actionPerformed. All three have arrows pointing to the target method, DecompilerPanel.addVarnodeHighlights.
