

ghidra.app.plugin.core.decompile.actions.  
RenameVariableAction.actionPerformed

ghidra.app.plugin.core.decompile.actions.  
RetypeVariableAction.actionPerformed

ghidra.app.plugin.core.decompile.actions.  
RenameVariableAction.getDataTypeOffset

```
graph LR; A["ghidra.app.plugin.core.decompile.actions.RenameVariableAction.actionPerformed"] --> C["ghidra.app.plugin.core.decompile.actions.RenameVariableAction.getDataTypeOffset"]; B["ghidra.app.plugin.core.decompile.actions.RetypeVariableAction.actionPerformed"] --> C;
```

The diagram illustrates a relationship between three methods in the Ghidra application. On the left, there are two source methods: `ghidra.app.plugin.core.decompile.actions.RenameVariableAction.actionPerformed` and `ghidra.app.plugin.core.decompile.actions.RetypeVariableAction.actionPerformed`. Both of these methods have arrows pointing to a single target method on the right: `ghidra.app.plugin.core.decompile.actions.RenameVariableAction.getDataTypeOffset`. The target method is highlighted with a gray background, while the source methods have white backgrounds.
