

StructureGraph::rawAction

IfcStructureBlocks
::execute

BlockGraph::calcForwardDominator

```
graph LR; A[StructureGraph::rawAction] --> C[BlockGraph::calcForwardDominator]; B[IfcStructureBlocks::execute] --> C;
```

The diagram illustrates a flow or dependency where two separate components, 'StructureGraph::rawAction' and 'IfcStructureBlocks::execute', both point to a single target component, 'BlockGraph::calcForwardDominator'. The arrows indicate a directed relationship from the left-hand boxes to the right-hand box.
